DETAILS OF 22nd TQM CONVENTION-2022

» "TINY QUALITY LEAP FORWARD ENSURES GROWTH & SUSTAINABILITY"

We are going through an environmental challenge. Multiple variants of Covid-19 are manifesting their might. Quality of life has languished and living standards have drastically changed. We have accepted this ordeal of nature with conscious restraint and humility. We have revived normalcy and rejuvenating quality in all spheres of life.

This is not about routine manufacturing and process improvement anymore; this is about creativity and innovation at every step and about a dynamic phenomenon called excellence. The tiny leap we are taking to maintain the quality, we expect will add to our growth and sustainability. We have to learn to live with such challenges and adapt ourselves.
